

ACOUSTIC Lighting

Acoustic Lighting combines a lighting source with sound-absorbing materials, to provide a luminaire that helps reduce unwanted noise in a space. These fixtures create a highly functional space that both absorbs the noise whilst providing a light source.

BRIGHT provides different designs within acoustic light range. Lamps in combination with an acoustic function is a very efficient way to improve a space.

Acoustic lighting combine form and function to enhance workspaces visually and acoustically, creating distraction-free, productive and comfortable environments such as offices, classrooms, conference rooms, and public spaces where both lighting and sound control are important. Studies have shown that light and room acoustics have an undeniable impact on productivity, human interaction and well-being.

The BRIGHT range of acoustic lighting provides highly effective noise absorption combined with stylish and modern design. Find the perfect acoustic light when exploring our targeted solutions today.

Improving the acoustics efficiency is definitely one of the interventions that best contribute to make a space more enjoyable. This is made possible by limiting to a minimum the sound intensity and averting its propagation and reverberation within the space.
