

Athens Olympic Museum

FUGA 2 RING SP

PENDO M 1R TR3B

New prestigious project furnished up by BRIGHT SPECIAL LIGHTING SA. The Athens Olympic Museum characterized by a balanced mix of exhibits, emotions, tokens and memorabilia that trigger the visitors and raise their interest at every step.

The museum revives the History of The Games, through the architectural prism of modernism and the minimalism of the interior designs, decoration and lighting.

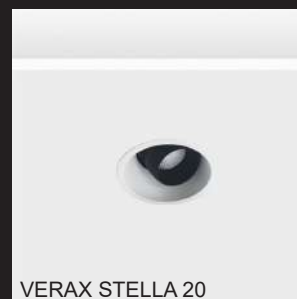

Efficient and flexible lighting systems helps the overall architectural approach and building philosophy of the Athens Olympic Museum which has been designed so as to be worthy of promoting the culture and history of the Olympic Games, while at the same time is fully compatible with modern requirements.

Faced with the challenge of bringing together standard specifications, economic targets, constructional conditions and design aspects into a single concept. The quality of lighting is not only important for the precise distribution of light and a qualitative art experience, but also for the long term cost – efficiency of the lighting installation. When comparing the efficiency of luminaires, key figures need to be evaluated base on identical lighting tasks.

Smart lighting helps tell the stories of works of art. And much like the artists whose work they illuminate, we are finding new ways to paint with light.
