

#projects SHOPPING MALL LIGHTING

Lighting requirements for malls and supermarkets may seem frivolous, but efficiency, longevity and flexibility are also required to achieve a successful lighting design. BRIGHT focuses on designing linear LED lighting systems that combine minimal design based on expertise.

The combination of high quality optical led boards that offer many advantages such as asymmetric, batwing, double asymmetric and intense, can achieve effective lighting on vertical surfaces, highlighting the products, of which can also be with a built-in battery to convert the fittings into EMG mode operation.
