

A relighting project for The Agora of Athens Olympic Sports Complex

SOLUS 2

projector

The impressive 100 -steel- arch -structure of the Agora was lit as a prominent visual reference of the urban space. Bright has installed **SOLUS 2** projectors to revive, after 17 years, a lighting concept of highlights and shadows and outline an outdoor high- dynamic-range environment of a vibrant social hub. The project explores the interconnection between sports and culture so the implemented LED lighting projectors are both of minimal and compact design integrating state- of- the- art LED components. **SOLUS 2** has a wide range of beam choices with low glare, high performance optics delivering a uniform accent lighting result and uses energy ultra- efficient technology.
