

VATES

downlights

Vates downlights are designed as the perfect lighting tool for Darklight technology. The fixture's embedded Darklight technology delivers high efficiency, optimal light result and top marks for visual comfort. In the lighting scene, vates stays almost, in most aspects, invisible for the observer due to its lighting source and components that are set smartly inside the fixture.

As a result, glare values and UGR degree are significant low. In addition, the fixture rotates on both axes vertical and horizontal. (355 on horizontal and up to 30 on vertical plane). Specifically, a sign on the fixture that depicts with precision the rotation angle of 10, 20 or 30 on horizontal axe, helps the user to adjust it even before ceiling installation. Their Darklight reflectors/ shades are visible to the observer and come in different colors. They can be easily replaced without tools and without removing the fixture from ceiling.

Vates fixtures meet the challenges of various applications such as offices, corridors, shops or museums, restaurants and residences. They also provide the right light for wallwashing effect. Vates family comes in different shapes of either circular or square fixtures that are installed in ceiling either with frame or with trimless option.
